

ADITHYAN U

SOC Analyst L1 · Threat Detection & Incident Response
Kerala, India | adithyanupillai@gmail.com | +918714454125

PROFESSIONAL SUMMARY

Cybersecurity graduate (B.Tech, 2026) specializing in SOC operations and threat detection, currently completing hands-on SIEM/SOC training across Splunk, Microsoft Sentinel, CrowdStrike Falcon, and Cortex XSOAR. Built a full-stack, AI-assisted SOC platform that unifies malware detection, threat intelligence, and incident reporting. Track record across 3 national-level CTF competitions (1 win, 1 runner-up) and a live VAPT internship identifying OWASP Top 10 vulnerabilities. Seeking a SOC Analyst L1 / Junior Cybersecurity Analyst role to bring defensive security skills into a production threat environment.

EDUCATION

B.Tech — Computer Science & Engineering (Cybersecurity) 2022 – 2026 · Result Awaited
Rajadhani Institute of Engineering and Technology (affiliated to APJ Abdul Kalam Technological University) — Trivandrum, Kerala

- Relevant coursework: DBMS, OOP, Operating Systems, Software Testing, Network Protocols (OSI & TCP/IP)

CERTIFICATIONS & TRAINING

Next-Generation SOC Analyst Training — SIEMXpert In Progress

- 4.5-month hands-on program across Splunk Enterprise + Enterprise Security, Microsoft Sentinel (KQL), CrowdStrike Falcon EDR, Cortex XSOAR, and Nessus, with detections mapped to MITRE ATT&CK.

EXPERIENCE

Cybersecurity Intern — Redynox (Remote) Nov 2025 – Dec 2025

- Performed web application penetration testing with OWASP ZAP across 3+ target applications, identifying OWASP Top 10 vulnerabilities including SQL injection and XSS vectors.
- Documented findings with severity ratings and remediation steps, feeding directly into the security team's ISO 27001-aligned remediation workflow.

PROJECTS

SentinelNexus — AI-Powered Host-Based SOC Platform

Python · FastAPI · React/TypeScript · YARA · VirusTotal API · Ollama LLM

- Solves fragmented SOC tooling by unifying YARA malware detection, VirusTotal reputation scoring, and LLM-assisted triage into 1 platform with a 3-layer architecture (FastAPI backend, React/TS dashboard, local LLM engine).
- Automated the full scan-to-report pipeline, auto-generating structured JSON/PDF incident reports and adding 2-tier RBAC (L1/L2) — cutting manual write-up effort and mirroring real SOC escalation paths.

Host-Based Vulnerability Scanner

Python · Nmap · CVE Databases

- Solves manual host assessment bottlenecks by chaining Nmap discovery → CVE mapping → risk-scored reporting across 4 severity tiers (Critical–Low) into 1 automated pipeline, speeding up analyst triage.

Host-Based Malware Detection System

Python · YARA · Signature-Based Detection

- Solves static-signature rigidity with an extensible YARA rule engine, letting analysts add unlimited custom detection rules for new threats without touching core scan logic.

CryptSafe — Secure File Transfer System

Python · AES-256 Encryption · RBAC

- Solves unsecured file transfer by pairing AES-256 encryption (data at rest + in transit) with multi-tier RBAC, ensuring only authorized roles reach protected files.

TECHNICAL SKILLS

Security Tools	Burp Suite, OWASP ZAP, Nmap, Wireshark, YARA, VirusTotal API, Nessus
SIEM / SOC Platforms	Splunk Enterprise + ES (SPL), Microsoft Sentinel (KQL), CrowdStrike Falcon EDR, Cortex XSOAR
Programming Concepts	Python (primary), C— scripting, tool development, automation
Networking	Incident Response, Vulnerability Assessment, OWASP Top 10, CIA Triad, RBAC
Frameworks Platforms	OSI Model, TCP/IP, DNS, HTTP/S, Firewalls, IDS/IPS fundamentals
	MITRE ATT&CK, NIST CSF (awareness), ISO 27001 (audit exposure)
	Linux (CLI), Windows, FastAPI, React/TypeScript, MySQL

ACHIEVEMENTS & COMPETITIONS

- 1st Place — Overclocked CTF | 2nd Place — Trinetra Hackathon | 15th Place — Hacker Gambit CTF
- 3 national-level CTFs; specializations span web exploitation (SSTI, session forgery, XSS/CSP bypass, padding oracle), cryptography, and binary challenges.
